Farmer and sustainable farming

Michael Hornborg
Laakspohjan Kartano, Finland

From a self-sufficiency point of view it is important to be able to provide food for the people living in Finland. The products should be good, tasty, healthy and recognizable foodstuff that can be used to create tasty experiences both in everyday life and more festive occasions. To achieve these goals, farmers need knowledge about how to cultivate the soil in a sustainable way and how to farm animals while caring for their wellbeing. This can be achieved by using the best mental and technical tools available. The Finnish farmer is doing his job "on the top of the world". This is quarterly economy in which a quarter is 25 years in agriculture and three times as much in silviculture, which forms an important part of many farmers' income. We thus need to be able to look far into the future.

Keywords: recognizable, self-sufficiency, farming
